The power of innovative financing Renovating buildings for energy-efficient cities

Venue: De Markten, Rue du Vieux Marché aux Grains 5, 1000 Brussels

4-5 December 2017

Urbanised areas account for more than 70% of global greenhouse gas emissions, and over 30% of these comes from the building sector. These figures make clear that boosting investments for sustainable building renovations is vital for achieving a clean energy transition in Europe.

Many European cities are already leading clean energy solutions and have joined local and EU wide initiatives such as the Covenant of Mayors. However, matching local ambitions with appropriate and adequate financing presents a major challenge.

During this conference we will sum up all you need to know on innovative financing models for energy efficiency building renovations. Through interactive round-tables you will have the chance to learn from experts and exchange best practices with your peers. A policy talk will give you the chance to be engaged in a constructive dialogue with key policy and decision makers.
