

Eilat-Eilot 8th International Summit

2-4 December, 2018 | Eilat IL

Governmental Support:

ISRAEL EXPORT INSTITUTE

Building on the success of Paris climate summit, and on the understanding of the need to deploy renewable energy as the main future energy sources in the world, this year Eilat-Eilot Clean Energy conference will address one of the major challenges on today's global agenda - "smart-clean cities" - smart cities should continually upgrade their living conditions and in the same time reduce pollution and CO2 emissions. The cities should adopt the concept of "prosumers" (a term meaning to both consume and produce at the same time).

Dorit Banet
CEO & Chairwoman

Noam Ilan
CTO & Chairman

The 2018 Eilat-Eilot Clean Energy conference will present technological innovations, policies, regulations and economic models that can facilitate smart city practices while offering citizens opportunities for involvement.

This Conference creates a positive networking environment for participants coming from the worlds of high-tech, innovation, economics, regulation and policy. Test cases to be presented at this year's conference include the city of Eilat, which already supplies 70% of its own daytime power needs (including those of the city's 22,000 hotel rooms), as well as cases from around the world – the successes, the challenges, the technologies and the policies that are driving dramatic change in today's cities by creating new urban economic engines.
